Slide 10

DC Motors: Basic Rules III

Torque and Speed

$$T = K_T i_a$$

$$R_a i_a + K_b \Omega = V_a$$

$$\Omega = -\frac{R_a}{K_b K_T} T + \frac{1}{K_b} V_a$$

Stefan Williams

Mech 1751: Introduction to Mechatronics

Slide 11

DC Motors Behaviour I

Equations of Motion:
Torque Drives a Load

$$T = \frac{K_T V_a}{R_a} - \frac{K_b K_T}{R_a} \Omega$$

$$T = J \frac{d\Omega}{dt} + B\Omega$$

$$J \frac{d\Omega}{dt} + \left(B + \frac{K_b K_T}{R_a} \right) \Omega = \frac{K_T V_a}{R_a}$$

Stefan Williams

Mech 1751: Introduction to Mechatronics

Slide 12

DC Motors: Behaviour II

$$J \frac{d\Omega}{dt} + \left(B + \frac{K_b K_T}{R_a} \right) \Omega = \frac{K_T}{R_a} V_a$$

$$\frac{d\Omega(t)}{dt} + K_1 \Omega(t) = K_2 V(t)$$

$$\Omega(t) = K_2 e^{-K_1 t} V(t)$$
